# **GROUP WORK**

**The target is for your city/ ULB to move to 100% Safe Sanitation by the year 2020:**

**According to your Group:**

- 1. What are the key constraints to achieving the above goal for your group (containment/ conveyance / safe disposal)?**
- 2. What are the key recommendations for addressing these constraints?**

**In your discussions, please take the following into account:**

- 1. It should be a city-wide solution and address sanitation in all types of settlements including slums, institutions, public spaces, etc.**
- 2. Your solutions should account for backward and forward linkages with the other two components.**
- 3. Please consider the necessary institutional/ regulatory, capacity and socio-economic issues in your discussions.**

**Thank You!**
